Abstract (en)
The invention provides a golf club, a putter, wherein a shaft is fixed within a large diameter grip by means of inserts which are in the form of weighting elements. In one embodiment the weighting element is in the form of an end cap at the end of the grip thereby forming a balancing moment to counter the force acting at impact. In another embodiment weighting elements are provided at both ends of the grip to provide a "high-inertia" grip. <IMAGE>
