Abstract (en)

[origin: EP1153666A2] Method involves using a coating machine in which the coating material passes from the mouth of a delivery system into a spray tool. A first area of workpiece is coated with a first spray tool, the tool is removed from the machine without the delivery system and replaced by a tool (25) with a different spray mode and another area of workpiece or another workpiece is coated using the second tool. Independent claims are also included for the following: a coating machine.
