Abstract (en)

[origin: EP1154063A2] The washing machine has a drum drive motor (8) that is operated by a controller (2) that has a triac power stage (11). The cycle is controlled by an electromechanical programming unit that has a program cylinder (3) and a reversing cylinder (4). This operates together with interlock switches (S1,2). In the event of a short circuit the system shuts off the heating and goes to standby.
