Abstract (en)  
[origin: EP1154099A2] The cover has an end carrier element (1), which has support elements to support a frame component, which are formed at the carrier elements. The carrier element has an extruded pressed profile, whose pressing direction (z) is perpendicular to the running surface (5) of the frame cover (3). The support elements are formed as passages. A plug element, which is formed as an extruded pressed profile fits in each passage. An Independent claim is included for a system frame, especially for scaffolding.
