Abstract (en)  
[origin: EP1154396A2] The present invention relates to a multi-function super-thin indicator comprising a thin electroluminescent plate having a lightening portion being provided in a lightening area representing substantially the same displaying area of a light emitting diode. The lightening portion is divided into several sub-lightening portions, which contain plural lightening segments lined circularly in sequence. Every sub-lightening portion constitutes a brighten figure of figure portion stacked on the lightening portion to form indicators showing various expressions in substantially the same area to show various colorful effects within the same expression. Furthermore, the indicator can be applied to various kinds of objects or marks to make them vivid. <IMAGE>
