## Abstract (en)

[origin: FR2789896A1] The composition for washing keratin fibres is new. The composition comprises, in aqueous medium, a) at least 0.02 (preferably 0.02-20) wt.% of at least one organic water soluble silicon compound A, selected from silanes containing one silicon atom and siloxanes containing two or three silicon atoms per molecule, and also containing at least one basic group and at least two hydroxyl or hydrolyzable groups per molecule; and b) at least 4 (5-50, especially 8-35) wt.% of surfactant B selected from anionic, nonionic or amphoteric surfactants, or their mixtures. The composition may also contain up to 15% of viscosity controlling agents selected from electrolytes, hydrothropic agents or thickening agents, one or more softeners selected from cationic surfactants, anionic, nonionic, cationic or amphoteric polymers, optionally quaternized proteins, or silicone oil, wax, gum or resin, and cosmetic agents such as perfume, preservative, sequestrant, mousse stabilizers and acidifying or alkalizing agents. Independent claims are also included for a process of washing of keratin fibers involving application of composition as claimed, followed by rinsing with water.
