Abstract (en)

[origin: WO0038496A3] The invention concerns a method for optimising the operation of a tank furnace comprising nozzles which consists in making fine particles of prerduced ore. The fine particles of prerduced ore are mixed with a solid carbon reducing agent, the fine prerduced ore particles having a size distribution less than 2 mm and the solid carbon reducing agent having a size distribution less than 200 mu m. The mixture is injected hot through the nozzles into the tank furnace, wherein the fusion of the prerduced ore particles takes place.
