Abstract (en)
[origin: WO0147641A1] Nebulizer (1, 100, 101) for liquids applicable to the neck (O) of a recipient (C) that contains the liquid (L) to be delivered including a hollow body (3), that at the top consists of a compression chamber (4), a suction duct (5) for the liquid communicating with the compression chamber (4), valves (6) designed to close/open the suction duct (5), the first sealed piston (9) coupled in a sliding configuration to said hollow body (3) with a tubular chamber (8) that communicates with the compression chamber (4) and with a delivery channel (11) for the liquid (L), a stopper plug (13) that moves in a contrasting manner with the first set of elastic means (14) to close/open a choke (10) and the second set of elastic means (15) installed between the hollow body (3) and the sealed piston (7). The first set of elastic means (14) is made with non-metallic materials.
