Abstract (en)
[origin: US6508380B1] A dispenser (1) for dispensing strip elements (4), having a supply chamber (3) for accommodating a strip-element stack (St), and having a discharging pusher (14) with a nose (16) for interacting with a first strip element (4') of the strip-element stack (St), via a discharging slot (15) which is adapted to the thickness (y) of a strip element (4). In order to achieve a more functionally advantageous solution, the discharging pusher (14) has a pusher nose (16) which is made of elastically compliant material and, in the uninfluenced state, projects by more than the thickness (y) of the strip element (4).
