Abstract (en)
[origin: DE19908051A1] The aim of the invention is to improve the stability in storage of bleach-activating acetonitrile derivatives contained in solid cleaning agent compositions. To this end, compounded compounds of formula $R<1>R<2>R<3>N<+>CH_2CN X<->$ are used in which $R<1>$, $R<2>$ and $R<3>$, independent of one another, represent an alkyl group, alkenyl group or an aryl group with 1 to 18 C atoms, whereby groups $R<2>$ and $R<3>$ can also be part of a heterocycle which includes the N atom and optionally includes additional heteroatoms, and X represents a charge-compensating anion. Compounds of this type are produced by drying in a vacuum, whereby a suspension of the acetonitrile derivative and of a solid supporting material is placed in a mixer, and this mixture is dried using superheated steam. Agents used, in particular, for the machine cleaning of dishes contain approximately 1 wt. % to 10 wt. % of such a compound that intensifies bleaching.
