Abstract (en)  
[origin: CA2363122A1] The invention relates to a sewing machine with a thread withdrawing device (24), which prevents the needle thread end from being caught under the material pressure plate (9), at the beginning of a sewing process. The thread withdrawing device (24) comprises an arm (22), with a thread eyelet (23), said arm being arranged perpendicular to the path of the needle thread (27), running between two thread guides (25, 26). Said arm may be displaced perpendicularly across the said path of the needle thread (27), between a rest position and an operating position.
