Abstract (en)
[origin: WO0049348A1] The invention relates to a freezer cabinet (10) comprising a freezer compartment (14) which is arranged inside a heat-insulating housing and in which several pull-out containers (15, 18) are provided for storing freezer goods. These containers are placed one above the other in a drawer-type arrangement. At least one of the containers is used to hold cold accumulators (23). Said cold accumulators (23) have elements which are able to engage with fixing elements provided in the holding area of the container at least essentially positively and/or nonpositively in order to fix the cold accumulators (23) in at least as stable a position as possible in the holding area.
