Abstract (en)

[origin: DE19907711A1] The invention relates to data carriers such as compact discs and digital video discs. Said data carriers are inscribed with audio data and/or video data in a certain format. The data carriers can normally be read of one or two adequate playing devices. The audio data and video data are stored on the data carrier in at least two formats which differ according to the devices in order to guarantee or increase multimedia use. The data on the data carrier can thus be read by at least two different playing devices.
