Abstract (en)

[origin: DE19910148A1] The novel vacuum interrupter chamber is provided for circuit-breakers in the low voltage range and is characterised by a compact structural shape with low height and high switching performance. The housing of said vacuum interrupter chamber consists of a plate-like power connection (21), a cylindrical wall component (3) which surrounds flat spiral petal contacts (6, 7), a ring-shaped insulator (4) and a diaphragm disc (5) with a centred power supplying pin (2).
