Abstract (en)

[origin: EP1155717A1] Steeping up support (1) is made of a fixation mounting zone (5) and a connecting zone (6). The connecting zone has one end (8) integral with the superior face of the board. The two elements are held together by fixing means. A groove (20) in the support is filled with an elastic material, which straightens the board back in its original shape.
