Abstract (en)
[origin: EP1155791A2] The press has a station for off-cut ejection and/or layer separation. The station has a chassis (1,2,3,4) carrying a pair of transverse horizontal rails(5,11) carrying the ejection or separation tool. The first rail (5) is fixed relative to the chassis, while the other rail can be moved (14) in the longitudinal direction, and has a profile that accepts and retains the appropriate tool.
