Abstract (en)
[origin: EP1155851A1] The device consists of at least one ISDN-S0 connection to a service station (12). At least one of the ISDN lines connected to the service station is fed to a printing network (6) connected to the control stations (2) of the printing machines (1) or auxiliary devices via a remote diagnosis and maintenance station (10) acting as a remote maintenance gateway.
