Abstract (en)
[origin: EP1155957A1] The motor is carried in a space in a boat hull. Part of the motor protrudes from the hull into the water. The propulsion motor (3) has an upper electric motor (7) and is connected to it by a rotation shaft (8). There is mechanical translation from the vertical to horizontal plane. There is an eccentric fixture supporting the motor allowing separation of the helix (11) from the drive shaft.
