Abstract (en)
The coupling (29) employs a magnetic assembly (30). This locates the rotor shaft (4) and cup (26) axially. A keying assembly (31) locks them together in rotation. Preferred features: The magnetic assembly comprises a permanent magnet (32) secured to the rotor shaft, attracting a ferromagnetic extension (33) of the cup (26). The permanent magnet is located in a rotationally-symmetrical housing (34) which is locked in rotation with the rotor shaft (4). The housing is press-fitted into its seat in the tubular rotor shaft (4). The keying (31) is polygonal (35) (hex). The housing includes a cylindrical guidance bore (37), surrounding the rotor cup extension (38) when installed.

Abstract (de)
Die Erfindung betrifft einen Offenend-Spinnrotor (3) der mit seinem Rotorscheft (4) in einer Spinnrotorlagerung (5) abgestützt ist und dessen Rotorscheft (4) mit einer Rotortasse (26) über eine Kupplungsvorrichtung (29) so lösbar verbunden ist, daß der Rotorscheft (4) bei einem Ausbau der Rotortasse (26) in der Spinnrotorlagerung (5) eingebaut bleibt. Erfindungsgemäß ist dabei vorgesehen, daß die Kupplungseinrichtung (29) eine Magneteinrichtung (30) zur axialen Arretierung von Rotorscheft (4) und Rotortasse (26) sowie eine mechanische Verdrehsicherung (31) umfaßt.
