Abstract (en)

[origin: EP1156180A2] The lock has a bolt (3) that is operated by a key and a latch bolt (2) that is pulled back by a follower (1). The key or a lock cylinder (4) has a lock component (5) that engages a slider (6) parallel to the bolt. The displacement of the slider is transferred and increased by a first arm (7') of a lever (7) joined to a lock casing. The bolt can be pulled back by the follower, which engages a second arm (7'') of the lever to operate the follower.
