Abstract (en)
The sign plate (100) consists of two panels (110, 120) with clips (114, 115; 124, 125) on opposite corners which allow them to be fastened together with the sign between them, carried by at least one of the panels. The clips are designed to be fastened by pivoting the panels relative to one another about an axis (X) perpendicular to their planes, and the sign can be applied to the surface of one panel by silk-screen printing.
