Abstract (en)
[origin: EP1156558A2] Unit with protector elements for the protection of low-voltage installations against voltage excesses comprises a base (1) with conductor bridges (3) which span the input and output sides of the unit, and connect the phase leads to the protector elements. The base is also provided with a conductor bridge (4) at a right angle to the bridges (4) for analogous connection of the neutral/earth lead.
