Abstract (en)

[origin: EP1156610A2] The selection method uses a computer for evaluation of the mood of the public within the room, for providing condition data which are compared with preset parameters, to provide requirement data used for selection of the music and/or tone sequences which will provide the required mood, using data identifying the characteristics of each piece of music or tone sequence. An Independent claim for an automatic selection device for music and/or tone sequences is also included.
