Abstract (en)

[origin: WO0150711A1] The present invention discloses a network switch for a computer network which receives a network message from a network device and forwards the network message to an appropriate destination. The network switch has a plurality of ports for receiving and forwarding the network message. The network switch has a logical address server which assigns a logical address to a network device based upon the port of the network switch to which the network device is connected.
