Abstract (en)
[origin: EP1157633A1] The folding table has a table top (3) with at least two table top elements (3'), which can be folded and spaced stand foot units (1,1'). A support unit (11,11') is arranged under each table top element. Several parallel hinge and pivot axles are arranged transversely to the table top. An upper pivot axis (15) for each stand foot unit pivots it directly with respect to the table top. An outer lower pivot axis (17) for each stand foot unit is supported at each support unit. Both support units are connected in the area of a connection axle (23) running transverse to the central vertical or symmetry plane (19). A joint axle (27) is provided opposite ends of the support unit opposite the outer lower stand foot pivot axis. The lower side of the table has spacers (29), which is connected at each projecting end under the table plate lower side with the joint axles.
