Abstract (en)
The bedding system has a mattress (1) made from at least two layers (3) of natural or synthetic latex foam or polymer fibres, preferably between 4 and 6 cm thick, each with its own stretch cotton cover (4) and enclosed in one outer cover (2) with a sliding clasp fastener (5). The layers are designed to be washed in water with detergent, and treated with bactericidal, acaricidal and/or antiviral agents that are active at temperatures below 60 deg C and inert relative to latex vulcanizing substances. The system can include a range of pillows and duvets that can be similarly treated.
