Abstract (en)

[origin: CA2308641A1] A vertical heat treating furnace for passing a metal strip, therethrough for heat treatment and a hearth roll applied to a heating/soaking furnace of the vertical heat treating furnace are disclosed. The hearth roll can be configured such that the taper angle of each of first taper sections continuous to a flat section at a central portion of the hearth roll from a roll axial direction is larger than the taper angle of each of second taper sections continuous to each of the first taper sections from the roll axial direction. The length Lc (mm) of the flat section and the length L1 (mm) of the first taper section can satisfy the following relationships: $0.5 \leq Lc \leq W_{min}$ and $W_{min} \leq Lc + 2 \times L1 \leq W_{max} - 400$, where W_{min} is the minimum width (mm) of the metal strip, and W_{max} is the maximum width (mm) of the metal strip.
