Abstract (en)

A device for sorting coins into a plurality of different output channels, comprising at least one payment receptacle (2) which is adapted to sort, when actuated, the coins into a collection container or toward diverter means (4) adapted to divert the coins toward guiding means (5) for guiding the coins toward a plurality of different output channels, the device further comprising a single electromechanical actuator which is adapted to act simultaneously on the diverter means (4) and on the guiding means (5) in order to make the guiding means (5) pass from an inactive position into an active position, in which they form a passage path for the coins, the diverter means (4) being actuated simultaneously in order to make the coins pass toward the guiding means (5). <IMAGE>
