Abstract (en)  
[origin: EP1158840A1] Sets of parameters are stored temporarily or permanently in the remote control unit (12). These are transmitted individually, in groups or in their entirety, to one or more detectors (10), at a single command (14, 16). They are stored at the detector, to trip actuators controlling timers and/or delivering external signals, when switching thresholds are over- or undershot. An Independent claim is included for the corresponding remote control unit.
