Abstract (en)

[origin: DE10010307A1] The folding lid has a cover part (10) and a holding part (14) attached to the cover part by a hinge (12). The holding part is formed by an insertion clamp (14) with a support arm (24) on the outside (30) of the glass (18) and a spring arm (26) for the inside of the glass. The turning axis of the hinge runs radially offset outwards at a spacing from the underside (40) of the cover part. The insertion clamp has an outward-projecting protrusion (38) in the middle of the support arm from which two bearing pins of the hinge extend sideways in opposite directions.
