Abstract (en)
[origin: DE19908977C1] An individually-adjustable casing for making an artificial tooth, has an internal recess larger than the tooth stump to which it will be fastened. Its internal surface is pre-treated to bond adhesively with a complementary material. An individually-adjustable casing for making an artificial tooth, has an internal recess larger than the tooth stump to which it will be fastened. Its internal surface is pre-treated to bond adhesively with a complementary material. Before filling the volume between casing and stump, the later is covered by isolating material. Then on the stump and/or inside the casing, the complementary material or other dental material is coated. The casing is positioned on the stump. After setting, The casing is removed, removing isolation from the stump and/or from inside the casing. The casing is then fastened onto the stump using a dental adhesive (or cement)
