Abstract (en)
[origin: WO0045737A1] Tubular endoprosthesis, commonly known with the English name stent, comprising at least one tube (1) of biocompatible fabric integral with at least one tubular net (2) having substantially the same diameter, wherein some portions of the meshes of the tubular net (2) are bent so as to form a multiplicity of loops (3) protruding out of the tube (1) of biocompatible fabric. The present invention also relates to the use of said endoprosthesis.
