Abstract (en)

[origin: WO0053355A1] The invention relates to a method and a device for manufacturing plate parts (9). In the method, a continuous sheeting (8) to be worked is fed between two rolls (2, 3), wherein the plate parts (9) are cut and profiled simultaneously. In the device according to the invention, the rolls (2, 3) are synchronized to each other with a gearing (11) and/or electrically. The surfaces of the rolls (2, 3) are equipped with both profiling parts and cutting edges.
