Abstract (en)

[origin: WO0051893A2] An article carrier and a blank (10) for forming an article carrier of the basket type comprising in sequence a first end panel (14), a first side panel (16), a second end panel (18), a second side panel (20) and a third end panel (22) foldably connected together one to next. A base panel (72, 74) is hinged to respective one of the side panels (16, 20) and a handle a structure comprising first and second handle panels (38 and 52) is foldably connected to one or more of medial support panels (12 and 24) or end panels. The first and second handle panels (38 and 52) are adjacent to the first and second side panels (16 and 20) respectively and are separated therefrom. The first and second handle panels are so constructed and arranged to be placed in face contacting relationship to form a two ply handle when the carrier is set up. There further comprises a blank (80, 80a) for forming an internal partition structure which blank comprises a medial panel (86, 86a) adapted to be connected to the handle structure and to at least one of the end panels and a plurality of transverse partition panels (82/82a, 84/84a) struck from the medial panel to create a plurality of article receiving cells on one side of the handle panel when the carrier is formed from the blank.
