Abstract (en)

[origin: WO0053762A2] Homologues of the Arabidopsis NIM1 gene, which is involved in the signal transduction cascade leading to systemic acquired resistance (SAR), are isolated from *Nicotiana tabacum* (tobacco), *Lycopersicon esculentum* (tomato), *Brassica napus* (oilseed rape), *Arabidopsis thaliana*, *Beta vulgaris* (sugarbeet), *Helianthus annuus* (sunflower), and *Solanum tuberosum* (potato). The invention further concerns transformation vectors and processes for expressing the NIM1 homologues in transgenic plants to increase SAR gene expression and enhance broad spectrum disease resistance.
