Abstract (en)

[origin: US2002059961A1] The invention concerns a method for obtaining a woven fabric which consists in: continuously unwinding from a single warp beam, a set of parallel warp yarns; passing said set on a whip-roll; forming a shed using held means, said shed being defined in the forward movement direction of the warp, at the input through an opening stitch of the shed, and on the other side through a face stitch; inserting a weft yarn in the shed in the proximity of the face stitch to form a fabric; and finally uniformly pulling and batching the resulting fabric; method which consists, in the proximity of the shed opening stitch, in heating the warp yarns, and then cooling said warp yarns in the shed before they reach the held means, characterized in that only part (34) of the warp yarns is heated.
