Abstract (en)  
[origin: US2002134415A1] The modular tent is constituted by: a) a central tent including a frame and a canvas stretched over said frame, said tent having at least one opening formed in a vertical plane; and b) at least one add-on element connected by fastener means to the central tent at said opening. In the invention, the opening and the add-on element have a vertical axis of symmetry and the fastener means consist of first and second means (13, 19 and 14, 21) suitable for co-operating with each another, and disposed on the edge of the opening of the central tent and on the corresponding edge of the add-on element, the fastener means being arranged on opposite sides of the axis of symmetry so that the first means (13, 19) are on the same (right or left) side (11, 18) of the opening and of the add-on element, while the second means (14, 21) are on the other (left or right) side (12, 20).
