Abstract (en)

[origin: WO0149981A1] The invention relates to a valve control for controlling a gas two-way valve provided for adjusting the output of an internal combustion engine by opening and closing the gas two-way valve. The invention also relates to a method for controlling the gas two-way valve, whereby the opening and/or closing of the gas two-way valve occurs according to a delay during the opening and/or closing of the gas two-way valve. In addition, the gas two-way valve alters a preset adjusting time over a long period of time in order to determine the delay time, and the opening and/or closing of the gas two-way valve is detected.
