Abstract (en)  
[origin: WO0048411A2] A system and method (10) for facilitating wireless call connection to an emergency service. The system includes a mechanism for attempting a call to an emergency call center via a wireless service provider. The system monitors the availability of service (14) provided by the wireless service provider and automatically completes the call (16) if the service is or becomes available. In a specific embodiment, the system includes software for searching for a wireless service (18) through which an emergency call may be placed. The system repeatedly dials the phone number of the emergency call center until the call is completed. In the specific embodiment, the software for repeatedly dialing 911 includes silent-redial (30) software.
