Abstract (en)

[origin: EP1160189A2] The arrangement monitors the operation of the rollers in printing systems having a printed matter roll (12), esp. a paper roll, comprising a core (16) and a strip of paper (18) wound thereon. The arrangement also includes an information carrier (10) for storing roll data. It also has a processor unit (14) for reading out and processing the roll data. The information carrier is arranged on the core, in its interior or end region so as to be accessible from outside the core sleeve around which the paper is wrapped. Independent claims also cover a method for monitoring the rolls.
