Abstract (en)
[origin: EP1160368A2] The sewing machine to stitch ribbons to the edges of fabrics, and especially half sections of sliding clasp fasteners, has a carrier arm for the sewing machine (10) as the lateral carrier (2b) of a fixed gantry (2) across the fabric support table (1). The fabric laying surface (1a) extends as far as the side of the gateway away from the sewing point. The sewing machine, for stitching half sections of sliding clasp fasteners to fabric edges, has a straight sewing head (11) and a fabric advance at the presser foot. An additional fabric transport unit for the fabrics is at least at the zone of the straight sewing head. A cut-out in the fabric support table is at the zone of the straight sewing head and the fabric transport mechanism, as an access for the operative. The fabric transport system has two continuous paths (3a,3b), parallel to the stitching direction, with a limit guide (4) between them for the edges of the fabrics. Feeds (5,5') for covering ribbons (6) flank the limit guide, for the cut edges of the fabrics, and for the half-sections of the sliding clasp fastener. The sections of the sliding clasp fastener are delivered in cut lengths, or they are drawn off a wound roll. The straight sewing head and the looper head form a multi-needle sewing machine.
