Abstract (en)

[origin: EP1160386A1] The building facade assembly, with back ventilation, incorporates insulation units (8) of a thermal insulation material. Mountings (12) hold them against the underlay of the outer facade cladding (19). The mountings are in or at the side of the insulation away from the insulation support (9), without passing through completely so that there is no thermal bridge between the mountings and the insulation support. The insulation is a glass foam, with closed pores.
