Abstract (en)
[origin: EP1160398A1] The lock has a latch (4) displaced along a guide (3) in the lock housing (1), with a blocking element (8) moved into a locking position for preventing the release of the latch. An electric drive (13) is coupled to an operating mechanism (10) which has 2 operating ranges, used for operation of the blocking element and the latch via respective coupling devices (17,17a), with emergency release of the lock via an emergency release device mechanically coupled to the operating mechanism.
