Abstract (en)
[origin: EP1160401A1] The door lock comprises a rectangular, flat casing formed by two half shells (2) which are fitted into each other. One of the half shells receives a synchronizing activating locking mechanism for a lateral bolt (3) and two vertical opposite bolts (4,5). The connected vertical bolts can be dismantled from a part of the activating mechanism. The other half shell has retractable access fittings (13,14) to the bolts' coupling element (11,12). The half shells have fittings for the extension of the lateral bolt on one or other side of the half shells to allow a reversibility.
