Abstract (en)

[origin: EP1160736A2] The method involves entering working time detection functions and personal identification numbers at telecommunications terminals (9,10) connected to a telecommunications system (1). The functions and the personal identification numbers are provided with a time stamp and stored as data for call up by at least one of the terminals (2) connected to the telecommunications system. Independent claims are also included for the following: a telecommunications system and a telecommunications terminal.
