Abstract (en)
[origin: US6564974B1] A dispensing appliance for liquids consists of at least one cabinet-like supply module (1) and of a cabinet-like dispensing module (2) connected to the latter. A pull-out trolley (3) can be moved out of the front side of the supply module (1) and serves for receiving a supply container (8) which can be inserted through one of the two open side faces (6). The dispensing module has a dispensing space (17) accessible from the front side. The supply module (1) has a square plan contour with an edge length (a) which is equal to the depth (t) of the dispensing module (2) designed with a rectangular plan contour. The dispensing module (2) can be connected selectively to each of the three side faces (11, 18, 19) of the supply module (1).
