Abstract (en)
[origin: WO0055556A1] The present invention provides a novel barrier system between the refrigeration (12) and rethermalization (9) compartments of a food delivery cart. That is, a novel food delivery cart according to the present invention that has a rethermalization storage compartment (9) adjacent to a refrigerated storage compartment (12) which has a removable self-adjusting sealing (40) mechanism between the two storage compartments so as to provide a thermal barrier between the adjacent rethermalization and refrigerated storage compartments. This unique food delivery cart also includes rethermalization and refrigerated storage compartments that are adjustable in both vertical height and number of compartments per cart.
