Abstract (en)

[origin: DE19910419A1] The invention relates to a target cell-specific, multivalent protein (MVP) characterized in being comprised of the following components which are covalently bound to one another: a) a binding structure (a)_n specific for the vector; b) a linker (b)_m and; d) at least two binding structures (c)_o for the target cell, whereby, independent of one another, n=1, m=1-10 and o=2-10. The invention also relates to the production and use of said multivalent protein.
