Abstract (en)

[origin: DE19911394A1] The invention relates to a method for operating a machine for producing and/or improving material webs, especially paper webs. Process data is detected in the area of at least one section of the machine, especially the drier section (10) of a paper machine, using at least one measurable variable relating to the production process. Said data is evaluated in a combined manner in several measuring ranges (12) which are arranged in tandem in the direction of the process (P). The invention also relates to a measuring unit for carrying out such a method.
