Abstract (en)

[origin: WO0055426A3] The invention relates to a method for producing a track construction in which the rails (20) are provided with a shock-absorbing/elastic layer, or rail sheathing (18) before a support layer (30) which supports the rails is produced. Said support layer (30) is then moulded around the shock-absorbing/elastic layer from its mouldable support layer material and caused to set. The invention also relates to a track construction (8) produced according to this method and to a rail sheathing (18) used in this production method.
